IBRAHIM ALIYU ANATE

SOFTWARE DEVELOPER

WORK EXPERIENCE

Full-Stack Developer — OCT 2023 - Present

DLT Africa Tech Hub

- Built and maintained mobile and web interfaces using React.js and Node.js.
- Worked collaboratively on GitHub—handling pull requests, issues, and reviews.
- Contributed to database design using MongoDB and implemented authentication systems.
- Participated in Agile workflows with a focus on code quality and time tracking.

Technical Lead — OCT 2024 - Present

CareChain

- Designed and deployed a blockchain-based healthcare platform focused on secure patient records and decentralized healthcare funding.
- Led the architecture of smart contract systems using Solidity, integrating them with a user-friendly frontend built with React and Node.js.
- Mentored developers on Web3 development practices and contributed to open-source tools supporting the growth of healthcare-focused blockchain solutions.

PROJECTS & INITIATIVES

Open Source Contributions: Actively contributed to Web3 tools and community projects, mentoring upcoming developers and participating in collaborative coding efforts.

SUMMARY

I'm a Software Developer and Smart Contract Engineer with over 3 years of experience building real-world solutions in blockchain, fintech, and sustainability. I specialize in developing decentralized applications and smart contracts using Solidity, along with full-stack solutions powered by Web3 integrations.

I focus on creating scalable, user-centered products that promote financial inclusion and real-world impact—whether through DeFi platforms or sustainability-focused projects.

CORE SKILLS

- **Frontend:** React.js, React Native, JavaScript, TailwindCSS
- **Backend:** Node.js, Express.js, MongoDB
- **Dev Tools:** Git, GitHub, Docker (basic), GitHub Actions (basic), VSCode
- **Others:** AI tool exploration, basic DevOps, REST APIs
- **Soft Skills:** Reliable communicator, team-oriented, organized, honest

TOOLS & ENVIRONMENT

- MacBook (available for iOS builds/testing)
- Reliable internet and quiet remote workspace
- Comfortable with remote meetings, team tools like Slack, Notion, GitHub
